

Welcome to the on-line users' guide of F-Air

Integrated Forecast System Manager for Air Quality

F-Air is a software environment managing Integrated Modelling Systems producing and distributing **air quality forecasts** related products/services. Highly flexible because its modular architecture, it gives to the user several alternatives for customization, including **input data sources** (emission inventories, meteorology, chemical initial and boundary conditions), **meteorological driver** (WRF, RAMS, SWIFT), **dispersion model** (FARM, SPRAY) and **post-processing** options.
